Thermo-Cycler Industries

- Thermo-Cycler Industries Inc. was founded by Donn Kelter in 1984. Since that time they have been specializing in manufacturing of energy efficient industrial heating and ventilation systems.
- In the early 1980's, with buildings becoming better insulated and more attention being given to energy efficient heating, Donn felt there was a strong need for air turnover equipment that could offer similar energy savings and comfort in smaller buildings. In September 1984 the Thermo-Cycler GTC-400 was born to serve that need. Over the last 38 years, their product line has been expanded and Thermo-Cycler Dealers have installed their system in thousands of buildings where they have been saving energy and improving the working conditions of employees in millions of square feet of warehouses, manufacturing buildings, athletic fields and other large open area buildings. Thermo-Cycler has many years of personal experience in HVAC contracting, manufacturing and service.
- Thermo-Cycler takes a very sensible and simple approach to saving energy for heating warehouses and industrial manufacturing buildings. Compared with conventional infrared, unit heaters or direct fired makeup heating equipment, Thermo-Cycler can often save 30-50% in energy savings.
- Thermo-Cycler Industries is a small company with employees making between \$20 to \$40 dollars per hour and is always accepting employment applications. For more information about Thermo-Cycler check out their web site at www.thermocycler.com. For employment information, contact Gregory Kelter, President, at 219-767-2990 or tcinfo@thermocycler.com You may also stop by at 111 E. Hamilton St. Union Mills for an employment application.
